Drill screw UniDrill

Drilling screw for fastening of deck boards on aluminum, hardwood or bamboo substructures.

Dimension : 5,5 x 50mm
Drive : TX 25
Material : 1.4006, AISI 410, hardened stainless steel
Drilling capacity : 3mm

Due to the pressed-on drill tip, it is not necessary to pre-drill the substructure. The attachment part should always be predrilled with 5.5mm.

Due to the special thread geometry, wall thicknesses of the aluminum profile of 1.8 - 2.5 mm are possible.

The thickness of the attachment parts can be 21-28mm.
